

We have been designing and assembling Quality electronics for over 30 years

WHO WE ARE

Bologna 1982,
TEBO starts as a design and
production company of
electronic boards and
equipment, promoting values
such as Ethics and Sustainability
on the market, with the quality
of the best technological Made
in Italy.

Our goal is to provide a service
that satisfies our customers at
360°.

A team of over 30 employees
that is always trying to grow and
improve.

WHAT WE DO

We create "tailor-made" solutions, what the customer wants

Design and / or assembly of all types of electronic boards and equipment, in SMT and / or THT technology, always keeping our design, production and testing equipment up-to-date as well as the collaboration of primary level suppliers and partners.

DESIGN

After feasibility analysis, the design of an electronic device requires a careful and accurate research of components.

In this phase, the choice SMT or PTH comes into play according to expected quantities and the management of after-sales product.

The present and future availability of components is therefore a key point, as its functional efficiency.

Our research and development department, attentive and constantly trained on the new technologies in the market, is available to evaluate customers' problems and ideas.

ASSEMBLY

We select and use raw materials and components with the best quality standard, meeting our customers needs and using the most recent automatic production equipment.

In addition to our own testing equipment for functional or in circuit testing or owned by the customer, we develop dedicated test benches if necessary. This translates into a quality service aimed at the "zero defect" final goal on products that leave our production.

WHO WE DO IT FOR

Ours are not just customers but real partners, with whom a lasting and effective collaboration is built over time.

The sectors in which we operate are many:

- Industrial automation
- Telecommunications
- Automotive
- Home automation
- Renewable energies
- Biomedical equipment
- Nautical industry
- Equipment for sanitation
- Railway
- Textile industry
- Other sectors

We are always looking for new professional adventures to improve our know-how and face increasingly stimulating challenges.

HOW DO WE DO IT

Certified IPC-A-610
Application Specialist

Our Quality Management System allows us to continuously plan and monitor production processes to ensure quality production and a precise analysis of customer expectations and needs.

The full and constant satisfaction of loyal customers and the conquest of the trust of new ones is ensured through the continuous improvement of the effectiveness of our processes, technical assistance and the creation of customized and performing products.

WHERE WE DO IT

We previously talked about sustainability and our workplace embodies this important value.

We wanted to work in a building that consumes almost exclusively the energy it produces, with an ecological impact close to ZERO.

So in 2008 we opened one of the first Italian structures with these characteristics.

4000 square meters on which our offices and production area extend, with the most advanced and technological automatic equipment, constantly updated to meet every customers needs.
